

# **REPORT WEEK 8**

**SUBMITTED BY:**

HIMANSHI VARSHNEY (18COB454)  
SALONI GARG (18COB466)

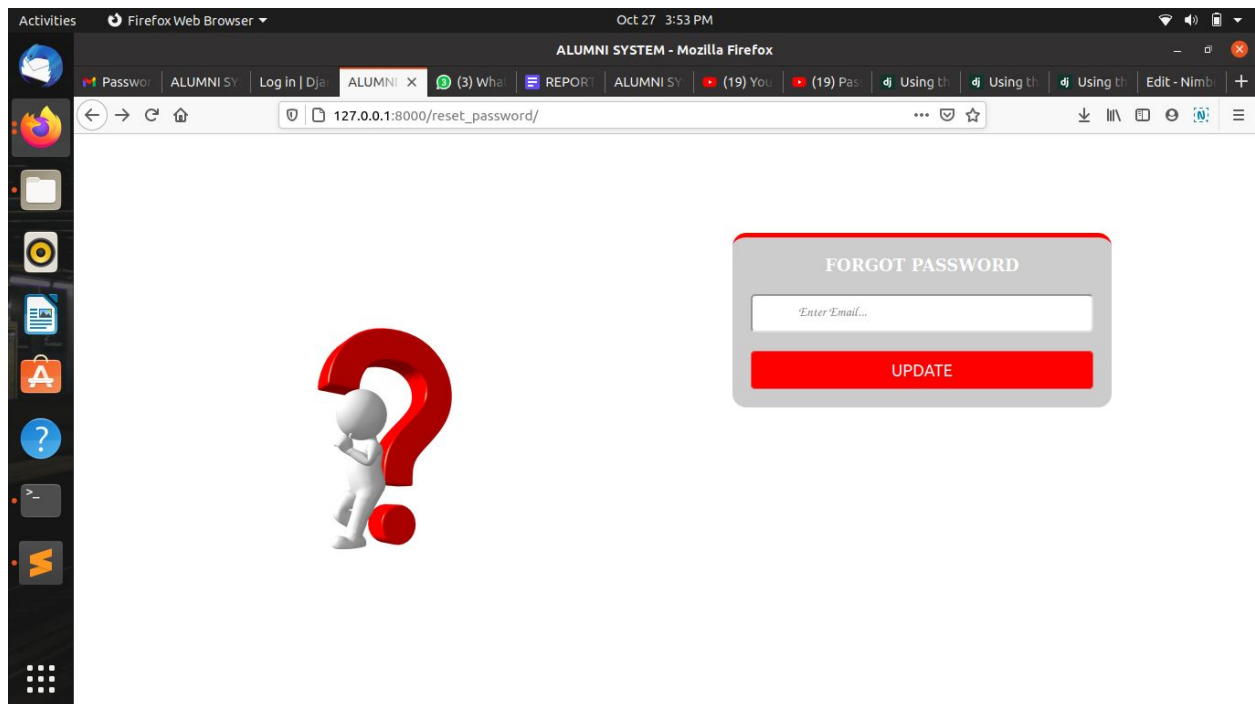

**SUPERVISOR:**

MR. FAISAL ALAM

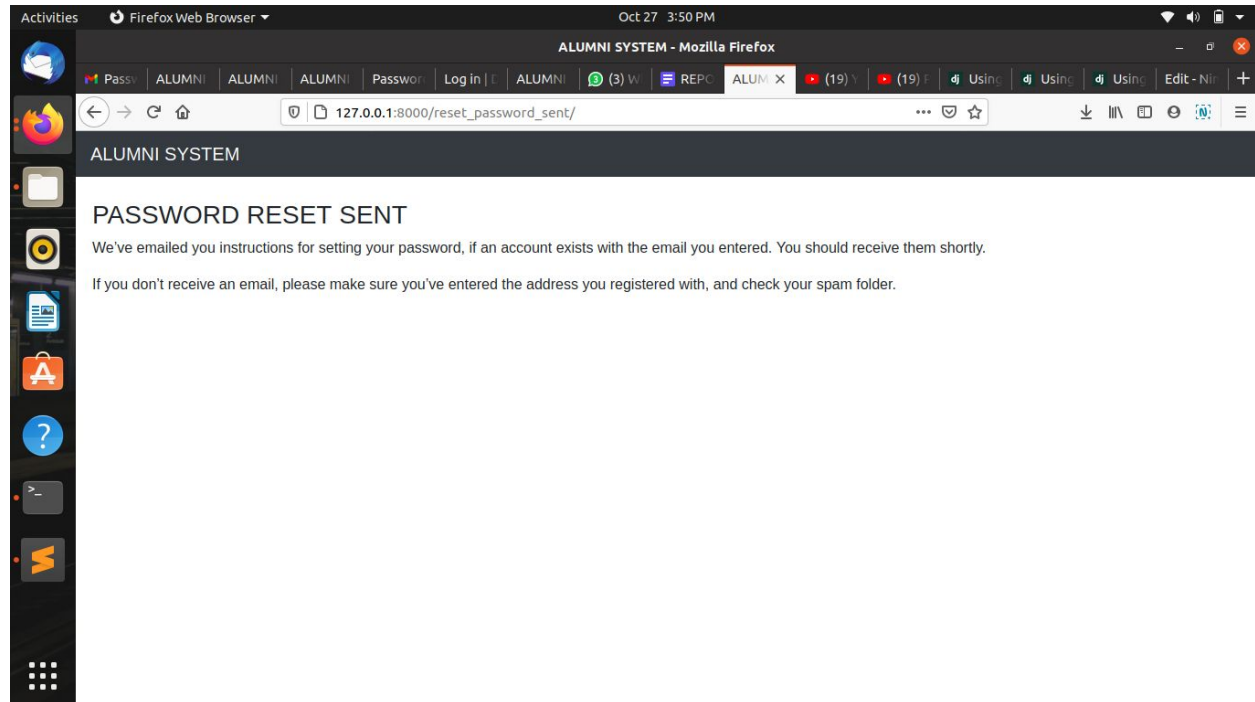

This week, we have included some functionalities for our system using the django framework.

The Functionalities are as follows:-

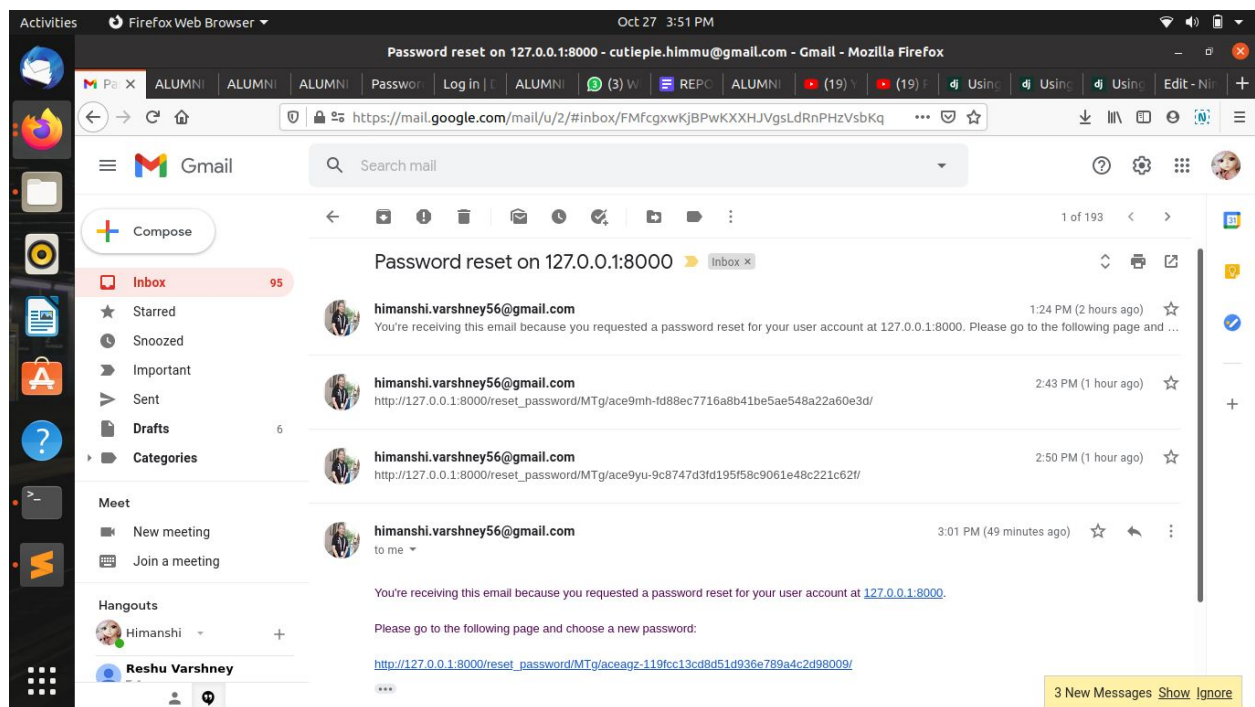

- We have made some changes in the appearance of the user dashboard.
- We have included the 'Logout' functionality for the logged in users.  
The logged in users will be directed to the login page when they log out.
- We have also included some security features like:-
  - If the user is already logged in, then the user will not be able to go to the registration or login page.
  - If the user is not registered or logged in the system , the user will not be able to go to the user dashboard.
- We have also included 'Forgot password/Reset password' functionality for the system.

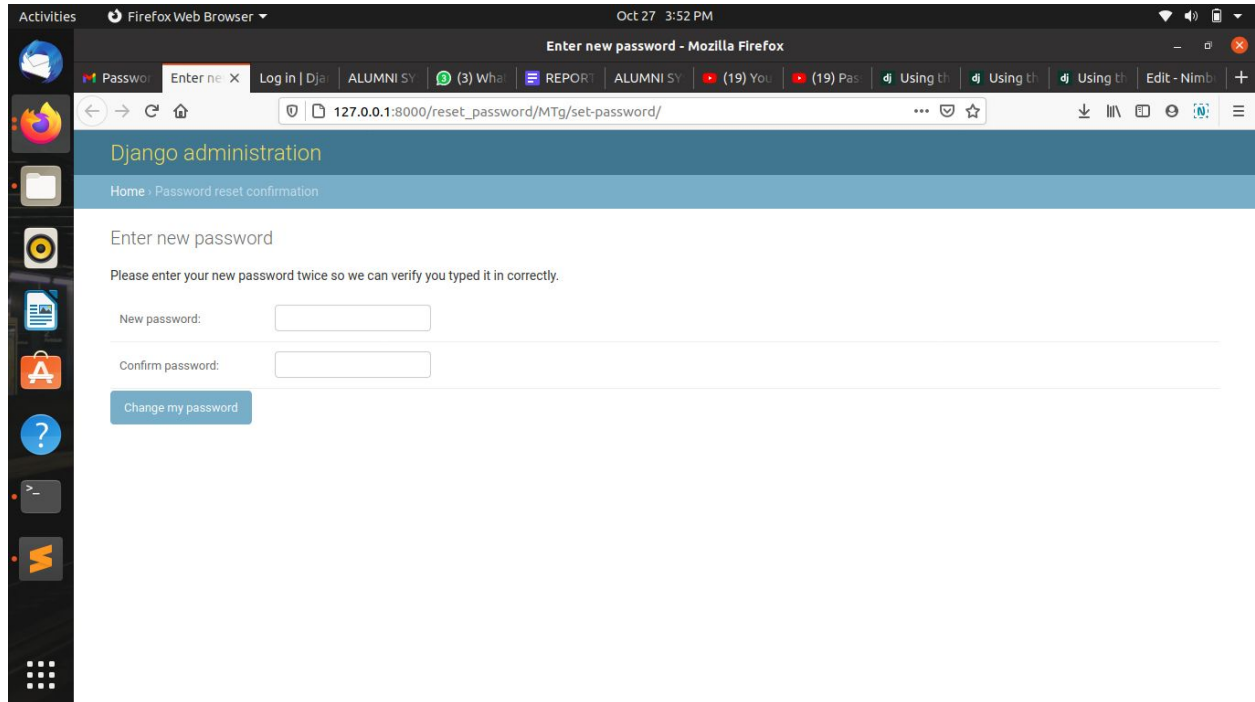

Password reset mail will be sent to the registered user-email with the message shown in the screenshot.

The mail has been sent as well as received with the link to reset the password.

The reset password link is shown in the below screenshot. The user needs to provide the new password and confirm password here. This is the builtin password confirm page provided by django framework. we will make our own password confirm page. This is only to show that backend functionality is working.

The below screenshot is showing that the password has been reset successfully.
